Abstract (en)
The present invention relates to a sports ball pressurizing container comprising a sealable opening and a pressure control system that comprises means to pressurize the container and a time-controlled pressure release means. The invention also relates to a method of pressurizing at least partially deflated sports ball in a container and releasing the pressure with a time controlled pressure release valve. The invention further relates to a pressure control system comprising an electronic control unit, pressurization means, a pressure gauge, an automatic time keeping device and a time-controlled pressure release means. The invention furthermore relates to the use of a sealable container for pressurizing sports balls.
