Abstract (en)

The apparatus has a rotor (8) i.e. flywheel, moved over a drive motor e.g. electromotor, in a rotating movement, and a spring accumulator (6) arranged over a releasable grip in a frictional engagement that is stretched by the rotor. A setting piston (4) is driven over the accumulator in a setting direction. A frictional clutch is arranged downstream of the rotor to connect the rotor and the setting piston. The drive motor is operated in a normal operation mode through a set of sequential driving processes without changing direction of rotation of the drive motor. The spring accumulator is selected from a group consisting of a gas spring such as pretensioned gas spring, and helical spring such as steel spring or carbon fiber spring.

Abstract (de)

Die Erfindung betrifft ein Eintreibgerät, umfassend einen Antriebsmotor, eine Schwungmasse, und einen Setzkolben, wobei die Schwungmasse über den Antriebsmotor in eine Drehbewegung versetzbare ist, wobei ein Federspeicher über einen lösbar Kraftschluss, insbesondere Reibschluss, durch die Schwungmasse spannbar ist, wobei der Setzkolben über den gespannten Federspeicher in eine Setzrichtung antreibbar ist.
