Abstract (en)
[origin: EP2514569A1] The hammer drill (1) comprises a motor-driven exciter (12), a guide tube (20) having several punched ventilation openings (23,24), and a piston-shaped striker (13). The piston-shaped striker and the exciter pass through the inside of guide tube, to delimit an air spring in the guide tube. A metal strip (25) is bent to form the guide tube with opposite lengthwise edges joined by one of a seam and a positive fit created by the teeth. The seam is wound helically around the working axis (10) of guide tube. An independent claim is included for manufacturing method of hand-held power tool.
