Abstract (en)
[origin: EP2514710A1] The distributor has a bolt (32) connected to a battery. Two main contactors (16) interrupt a power source during emergency stopping of an electrically operated industrial truck. The main contactors, a switch-on contactor (20) and a main fuse are mounted on a common flat, rectangular support plate (10) and electric-conductively connected with one another by using bolts (22-30, 34, 44, 48, 50) e.g. current carrying bolts and contact bolts. The plate is made of non-conductive plastic material. The switch-on contactor is arranged between the main contactors.
