Abstract (en)

[origin: EP2514905A2] The window frame comprises a block frame body (21) and a frame trim (22), which is attached to the block frame body to form an intermediate free space. The block frame body comprises multiple block frame elements (21a,21b), which are interconnected with each other in a corner area in pairs. The frame trim comprises multiple trim portions (22a,22b), of which two trim portions meet in the corner area of the window frame. A sealing part is arranged in the intermediate free space between the block frame body and the frame trim in the corner area of the window frame. An independent claim is included for a composite window for use with a composite window door for a window arrangement.
