Abstract (en)  
[origin: EP2514909A2] The window has a thermal isolating connection laths connected in a rectangular-shaped window frame. Slats (2, 3) are pivotably inserted into the window frame. Pinions are rotatably supported on both sides of plate-shaped axle journals that are placed in the window frame by using an axial outer pin outwardly directed in holes. The holes are placed between an inner element and an outer element (6) placed on the connecting laths. An internal pin in openings between the inner and outer elements is inserted into a clipped connection bar, where the inner and outer elements are made from metal.
