Abstract (en)
[origin: EP2514975A2] The fluid-flow machine has rotors (11,21,31) having a rotary element with multiple rotor blades (12,22,32) arranged on the rotary element, and the circumferential casings (15,25) having a central axis (2) and surrounding the rotor. The circumferential casing or a part has the annular space surfaces (16,26). The annular space surface has a structuring at least in one area adjoining a rotor on the circumferential side. The structuring of the annular space surface has, relative to the central axis of the circumferential casing, a circumferentially asymmetrical design.
