Abstract (en)

[origin: EP2515068A2] The device has light trace portions (2,3) that are merged in a hole (11). A punching portion is covered by an outer contour surface. A cover (6) is deformed by the forward movement and/or the axial movement of the punching portion so that the cover is fixed in a groove contour portion (8) of a projectile structure (10). The punching portion is made of metal. An independent claim is included for method for sealing hole in projectile portion using cover.
