Abstract (en)

[origin: EP2515186A1] The structure has a frame (0), a barrel and an escapement pinion that are connected together by a going train. A stepping-up epicyclic train of the going train includes an external planet gear (6) with a constant rotational speed during normal operation of the structure, an internal planet gear (7) kinematically connected to the pinion, a satellite gear meshing with the planet gears, and a satellite carrier (8) kinematically connected to the barrel and carrying the satellite gear. The satellite carrier effects one full turn per hour. An independent claim is also included for a timepiece.
