Abstract (en)
[origin: EP2515389A1] Electrical plug-type connector, namely data jack for receiving, in contact-making fashion, at least one data plug, with a housing and with a connecting device positioned in the housing, the connecting device having a printed circuit board (10) with electrical conductors, the connecting device furthermore having contact springs (11, 12, 13, 14, 15, 16, 17, 18), via which contact can be made between the conductors of the printed circuit board (10) and contacts of a data plug, the contact springs being anchored, at a first section (19) thereof, in the printed circuit board and permanent contact thus being made between said contact springs and the conductors of said printed circuit board, it being possible for contact to be made between the contact springs, via a second, elastically deformable section (20), and the contacts of a data plug, and at least some contact springs (12, 13, 14, 15, 16, 17) being free of any load when there is no data plug in the data jack.
