Abstract (en)

[origin: EP2515390A1] The block has an elongated housing (100) comprising a front face (121) and an opposed rear face. A connector (200) is opened on the rear face, and mounted to move in rotation with respect to the housing around a main axis (A1) orthogonal to a longitudinal axis (A2) of the housing. The housing includes a fixing unit for fixing the housing on a mounting wall i.e. wall face (700). The fixing unit is distinct from the connector, and cooperates with a complementary fixing unit i.e. button, arranged on the mounting wall for rotating the housing with respect to the connector.
