Abstract (en)
[origin: WO2011083214A1] The present invention relates to an accessory (7) manufactured from a sheet metal plate and used to form a shelving device for displaying and introducing items for sale to consumers, characterized in that said accessory comprises at least one reinforcement (74), the surface of which is limited to the portions enabling said accessory (7) to be assembled together with the other component accessories of said shelving device, said reinforcement (74) thus being arranged to only locally increase the thickness of said accessory (7), so as to enable optimization of the thickness of said sheet metal plate, while at the same time preserving an easily collapsible, reversible method of assembling said accessory.
