Abstract (en)
[origin: WO2011076830A1] The aim of the invention is to ensure a safe absorption of medicaments in the form of wafers, the easy removal of the medicaments from a dispenser and the easy refill of a dispenser as well as a tamper-free checking of a once adjusted sequence of wafer pockets (20) in the wafer pocket stack. To this end, a dispenser (1) and a wafer pocket assembly (100) that can be inserted into the dispenser (1) and can be fixed releasably therein are proposed. The wafers are packed into wafer pockets (20). The dispenser (1) according to the invention contains a stack of at least two wafer pockets (20), each containing one wafer, wherein each wafer pocket (20) comprises a wafer section (21) containing the wafer and at least one remaining section (24) that remains in the dispenser (1) when the wafer section (21) is removed. The dispenser (1) further comprises a storage chamber (9) for accommodating the wafer pocket stack, and at least one discharge opening (5) through which one wafer pocket (20) can be discharged from the dispenser (1) in a direction of discharge A. The wafer pocket stack is held in the dispenser (1) by means of at least one fixing means (19). The wafer pockets (20) are grouped and connected to one another in the wafer pocket stack by means of a holding element (10) of a wafer pocket assembly (100) which is fixed releasably in the dispenser (1), wherein the holding element (10) holds and fixes undetachably the respective remaining section (24) of the wafer pockets (20) by means of the at least one fixing means (19).
