Abstract (en)

[origin: WO2011076569A2] The invention relates to more effective anhydrous anti-transpirant compositions which are applied as a spray and which contain at least one anti-transpirant agent, at least one alun type double salt of general formula $MIMIII(SO_4)_2 \cdot X H_2O$ (wherein MI represents a monovalent cation, selected from potassium, sodium, rubidium, caesium and ammonium ions; MIII represents a trivalent cation, selected from aluminium, gallium, indium, scandium, titanium and vanadium ions; x represents a rational number in the region of 0 -12, including 0) and 0,01 - 7 wt % of at least one siliconoxide containing compound, selected from hydrophobically modified silicic acids and hydrophobically modified layered silicates.
