Abstract (en)  
[origin: WO2011086291A1] The invention relates to a kitchen appliance including a frame (1) supporting a mixing container, referred to as the vessel (2), including an opening through which ingredients can be added as well as a first working tool (10), comprising a head (12) connected to a means for rotating said head on its own axis (S), the first tool (10) comprising a working arm (14) including an active portion engaging with the ingredients to be kneaded in the vessel. According to the invention, said appliance also comprises a second working tool, referred to as the counter-tool (11), attached to a plate (5) rotated about an axis (P), the counter-tool having a working arm having an active portion engaging with the ingredients to be kneaded, the active portion of the working arm being adjacent to the path travelled by the active portion of the first working tool (10), such that the counter-tool (11) and the first working tool (10) interact with the ingredients to be kneaded in the vessel. According to the invention, the first working tool (10) is also rotated about the axis (P).
