Abstract (en)

[origin: WO2011076789A1] The invention relates to a film container of a blister than cannot be extruded, comprising a base film and a cover film for implementing a receiving chamber (4) for a filling material, in particular an active pharmaceutical ingredient formulation, wherein the receiving chamber (4) is connected to an opening area (6) for removing the filling material. The opening area (6) of the receiving chamber (4) is protected by means of at least one film section (7, 8) that can be separated at least in sections from the film container (1).
