Abstract (en)

[origin: WO2011076531A1] The invention relates to a shaft access enabling device of an elevator system (10) having a shaft access control unit (40) and at least one access monitoring unit (36), wherein the shaft access control unit (40) is provided to control an operating state of the at least one access monitoring unit (36) and the access monitoring unit (36) is provided to monitor at least one shaft access. According to the invention, the shaft access control unit (40) has at least two different operating modes for controlling the operating state of the at least one access monitoring unit (36) and inspects access authorization before changing between the at least two operating modes thereof.
