Abstract (en)

[origin: WO2011077014A1] The invention pertains to an illumination system (400) comprised of illumination devices (100) for improving the safety of an intersection of at least two different traffic routes (401, 402), where the illumination device (100) comprises a device body which serves as a mechanical obstacle preventing vehicles advancing along a first traffic route from entering a second traffic route. At the base of the device body there is a first light-emitting part (406) for illuminating the second traffic route intended essentially for light traffic. At the upper portion of the device body there is a second light-emitting part (407) to warn vehicles advancing along the first traffic route about light traffic advancing on the second traffic route essentially in the vicinity of the intersection.
