Abstract (en)
[origin: WO2011085774A1] The invention relates to a device for a piece of furniture, which comprises a furniture part movably accommodated on a body, for establishing a stop position of the furniture part, comprising an adjustment unit (2), which has an adjustable stop and which bounds a closing motion of the furniture part that can be performed in regular operation. According to the invention, the adjustment unit (2) comprises a stop part that can be resiliently deflected from a starting position, wherein the stop position is determined by the extent of a deflection in a fixed deflection position of the stop part.
