Abstract (en)

[origin: WO2011076536A1] The invention relates to a method for identifying lost or non-assignable luggage, in particular air travel luggage, which is subjected to a security inspection after check-in by being channeled through an x-ray scanner and the x-ray images being analyzed. In order to improve and simplify the method for identifying lost or non-assignable luggage without mechanized effort, according to the invention the x-ray images taken in the x-ray scanner, which contain details about the contents of the luggage, as well as assigned optically or electronically output information about the luggage are saved in a computer for later evaluation.
