Abstract (en)  
[origin: WO2011076638A1] The invention relates to a connection device for powering electrical equipment, said connection device comprising: a first electrical conductor (3) configured such that it is electrically connected to an electrical power source, and a second electrical conductor (5) connected mechanically and electrically to the electrical equipment to be powered. According to the invention, said connection device comprises an electrically insulating overmoulding (7) held mechanically, covering the first (3) and second (5) electrical conductors at the connection thereof.
