Abstract (en)
[origin: WO2011076918A1] The invention relates to a method for transmitting sequences of radio program content forming pre-established programming (program schedule, music programming, etc.) intended to be received by a set of remote receivers (4), by means of an optionally intermittent link, which, at each receiver (4), and irrespective of the possible link-related losses of sequences, comprises a step of reconstructing radio programming actually complying with the predefined editorial logic. The method enables the receiver to propose functions which, in particular, enable the user to move forward or backward in the radio programming reconstructed at the location thereof.
