Abstract (en)

[origin: EP2517761A1] The heelplate (1) has a clamp pivoting with respect to a heelplate body (4) around its transverse axle (6), and securing units e.g. rear and front screws or rear and front anchoring points or tabs (30, 31), securing a guide (3) on an alpine ski. The guide has a lower face that is moved toward the top with respect to a plane through which the guide rests on the ski, from a contact line remote from 20 mm vertically above the axis of the clamp, where the plane is defined by the lower face containing a portion of a guide surface receiving the securing units.
