Abstract (en)

A sealing lid comprising a lid body made of thin-film like sheet material, and a ring tab formed separately from the lid body The lid body comprises a panel portion covering an opening portion of a container to seal the container, and a protruding portion protruding from a circumference of the panel portion. The ring tab comprises a base portion held by the protruding portion, and a ring portion to which a finger is inserted. In the sealing lid thus structured, the ring portion of the ring tab is partially bonded to the panel portion of the lid body in a detachable manner.
