Abstract (en)

[origin: EP2518706A1] The quick closure device (16,18) has two side elements, where the latter side element is arranged at a preset distance from the former side element. The side elements are connected with each other in an end region by a connecting element. A through hole is provided in the end region of the side elements respectively, where the through holes of the side elements are arranged coaxially with each other. The side elements are connected with each other in the end region opposite to another end region by an engagement element. An independent claim is included for an arrangement for two units, which has a recess.
