Abstract (en)
[origin: WO2011064369A1] The invention relates to an endosseous implant (100), in particular for implantation into periodontal tissue, characterized in that: d. said implant consists of a sintered ceramic material; e. said implant includes a surface (110, 120) capable of being implanted in a recipient tissue (210, 220) and in that said surface includes a raised texture similar to the surface texture of the recipient tissue. The invention also relates to an advantageous method for manufacturing such an implant.
