Abstract (en)
[origin: WO2011080553A1] The device (1) for transporting strips of containers for fluid products, comprises at least a support rod (10) for supporting at least a strip of containers (2), each container (2) comprising a containment body (3) for containing a fluid product that extends in a dispenser neck (4) closed by a closing body (5), the containment body (3) and the closing body (5) being joined to the containment body (3) and to the closing body (5) of at least an adjacent container (2) to define a plurality of through openings (8) which are defined in correspondence to the dispenser necks (4), in at least one of said openings the support rod (10) being fittable in a transport configuration in which the rod is arranged substantially horizontal. The cross section of the support rod (10) comprises a base portion (11) which in said transport configuration is suitable for locating the dispenser necks (4), and an appendix (12) which extends substantially upwards from the base portion (11) and which in said transport configuration is suitable for supporting by resting at least one of the closing bodies (5), the horizontal overall dimensions of the appendix (12) being substantially less than the horizontal overall dimensions of the base portion (11).
