Abstract (en)

[origin: WO2011080251A1] The invention relates to a folding device for folding limp material parts, comprising a folding unit (10) which is intended for folding individual limp material parts (12), a storing unit (14) which is intended for receiving the folded limp material parts (12) from the folding unit (10), a supply unit (16) which is intended for presenting unfolded limp material parts (12), and a transporting unit (18) which is intended for feeding the unfolded limp material parts (12) from the supply unit (16) into the folding unit (10), and a presenting unit (20) which is intended for presenting accessories (22) to the folding unit (10). The presenting unit (20), intended for presenting accessories (22) to the folding unit (10), comprises a removing unit (24) for storing unsorted accessories (22) and a depositing unit (26) for receiving sorted accessories (22).
