Abstract (en)

[origin: WO2011080386A1] The present invention relates to a method and system for producing fibrous material. In the method, fibrous suspension is supplied onto a wire in such a way that a web is formed and the formed web is dried. Further in the method, after the web formation, the web is kept at least partly in contact with said long wire continuously until the dry matter content of the web exceeds a predetermined limit value, in any case at least to the press section. A system for producing fibrous material in a web forming machine comprises fastening members for placing a wire in said machine in such a way that the wire runs continuously from at least the web forming section substantially to the press section.
