Abstract (en)

[origin: WO2011080086A2] The invention relates to a handle attachment for handles that are to be fastened to household appliances. Said handle attachment comprises a connecting element which is designed in such a way as to be fastened using a seal that is in contact with a tube piece extending in two directions such that the connecting element can be fastened to the door without leaving any empty space about the longitudinal axis of the connecting element. The handle attachment is fixed in both the radial and axial direction with the help of the connection element that is in the form of a normal screw.
