Abstract (en)

[origin: WO2011079867A1] The invention relates to a device for performing heat treatments comprising at least one treatment module (10), which has a first and a second heating section (11a, 11b). Hot air (L) is introduced into the heating sections (11a, 11b) via a line connection (13). After the treatment, the hot air (L) is discharged via suction means (14). The suction means are arranged at the end faces of the heating sections (11a, 11b).
