Abstract (en)

[origin: WO2011107172A1] In order to simplify the operation of device carriers, in particular the changing of the switching positions, while still enabling the use of plug contacts, a device carrier (1) is proposed, wherein the position of the control-current connection contacts (6) can be changed relative to the position of the main-current connection contacts (3) in the insertion direction (9) and/or the position of the main-current connection contacts (3) can be changed relative to the position of the control-current connection contacts (6) in the insertion direction (9).
