Abstract (en)
[origin: WO2011080324A1] The invention relates to a capacitive sensor assembly for a motor vehicle, having a capacitive sensor element which comprises at least one first electrical conductor element, and having a reference conductor element defining an electrical reference potential and being interspaced from the first electrical conductor element. The invention is characterized in that the first electrical conductor element (1) is designed as an outer conductor surrounding the reference conductor element (3) which represents the inner conductor.
