Abstract (en)  
[origin: CN102763966A] The invention relates to a hair styling device having a comb-like molding tool (2), which comprises two tine rows (Z1, Z2). One of the tine rows can be adjusted with respect to the other tine row, so as to open and close of a hair styling gap (H) between tines (Z1.1...Z1.x) of one tine row (Z1) and tines (Z2.1...Z2.x) of the other tine row (Z2). The hair styling device is characterized in that one of the two tines (Z2.1...Z2.x) enclosing the hair styling gap (H) always has a hair separating projection (9), which covers, at a closed position of the hair styling gap (H), a top surface (10) that is directed away from the root of the complementary tines (Z1.1...Z1.x).
