Abstract (en)

[origin: EP2520512A1] The pallet (34) has a pallet floor (33) supporting an inner container (21). Support feet are provided for a central skid (35) and two outer skids (36, 37) for supporting the inner container, where the central skid and the outer skids are connected to one another by a skid bridge to form a pallet base. The pallet base is handled independently from the pallet floor for establishing a non-positive plug-in connection with the pallet base. The pallet floor encompasses engagement devices assigned to the support feet to interact with assigned engagement devices of the support feet. An independent claim is also included for a liquid transport and storage container.
