Abstract (en)

The invention relates to a joint between corner edges (1a, 3d; 2a, 4d; 1b, 2b; 3b, 4b; 3c, 4c; 1d; 2d) of site huts (1, 2, 3, 4) arranged adjacent to each other with a space (A, B, C) between them, or between a supporting surface (6) and a corner edge of a site hut when arranged in an elevated manner with a space (D) below the site hut. The space is covered by a connector element (7, 8, 9, 10, 11, 12, 13, 14, 15) comprising a sheet member (71, 81, 91, 101, 111, 121, 131, 141, 151) and an insulating member (72, 82, 92, 102, 112, 122, 132, 142, 152), said sheet member forming an exterior surface and the insulating member covering the space (A, B, C, D) substantially entirely. In an assembly comprising such a joint a chamber (16), preferably closed, is formed between the site huts.
