Abstract (en)
[origin: EP2520747A2] The structure (6) has a metal plate (7) that is moved between an open position and a closed position. A detection unit is provided for detecting the positions of a closure pin (8) and a slider (14) which is arranged at the metal plate. A retainer is provided for holding the closure pin in the open position. The closure pin is connected directly with the slider for the drive of the slider. The metal plate is provided with a guide element for the slider. The transmitting elements and receiving elements are provided in the detection unit.
