Abstract (en)
The tower comprises two tower elements (30), in which one of the tower elements has a tower core (32) and a longitudinal guide (34), which is arranged for guiding a carriage along the tower element at the tower core. The tower core comprises a tubular body, which is made of a fiber composite material, particularly carbon fiber reinforced plastic. The other tower element is made of metal material and comprises another longitudinal guide. The tubular body comprises a circular ring shaped or rectangular cross-sectional profile. An independent claim is included for a drilling tool comprising a carrier vehicle.

Abstract (de)
Die Erfindung betrifft ein Mastelement für ein Bohrgerät mit einem Mastkern und mindestens einer Längsführung, welche zum Führen eines Schlittens entlang des Mastelementes an dem Mastkern angeordnet ist. Zur Verringerung der Kippgefahr ist es nach der Erfindung vorgesehen, dass der Mastkern einen Rohrkörper aufweist, welcher aus einem Faserverbundwerkstoff gebildet ist.
