Abstract (en)

[origin: EP2520859A2] The mixing system (1) has a pressure atomizer (3) for atomizing the liquid fuel by use of compressed air in a supply direction in a combustion chamber (V). The pressure atomizer has a fuel nozzle (4) with an end-sided fuel outlet area, and a compressed air inlet pipe with end-sided air outlet area. Air supply channels (12) are provided such that the channels are limited radially inwards by a receiving space (15) for the fuel nozzle. The radial outer contour of the fuel nozzle is designed for positive incorporation of the end-sided fuel outlet area.
