Abstract (en)

The material has magnetically effective partial components (10a) that are cellularly formed and provided with pore structures (12a). The pore structures are partially opened and/or closed, and exhibit an effect with hard magnetic or soft-magnetic characteristics. The pore structures are mechanically and/or thermally treated to realize texturing, and the partial components are designed in a self-supporting manner. The partial components absorb electromagnetic vibrations, and filling mediums e.g. oil or oily liquid, are provided within the pore structures. An independent claim is also included for a system comprising an electric motor.

Abstract (de)

Die Erfindung geht aus von einem magnetisch wirksamen Werkstoff, insbesondere für elektrotechnische, magnetische und/oder elektronische Anwendungen. Es wird vorgeschlagen, dass der Werkstoff zumindest eine magnetisch wirksame Teilkomponente (10a-c) aufweist, die zellular ausgebildet ist und die eine Porenstruktur (12a-c) aufweist.
