Abstract (en)
[origin: WO2011083037A1] The invention relates to splitting off a thin layer (16) from a foam body (11) by means of a band knife (12). A removal device (20) lifting and removing the layer (16) from the cutting point comprises a belt conveyor (21) having a conveyor element (22) that can be electrostatically charged. Lifting and removing the layer (16) from the cutting point is done by the electrostatic attraction to the conveyor element.
