Abstract (en)
[origin: WO2011144522A1] The lighting apparatus (1;13) has a light source substrate (2) to whose front face (2a) at least one semiconductor light source (3), in particular a light-emitting diode (3), is fitted, and the rear face (2b) of which is fitted to an electrically conductive mount, wherein, in addition to the light source substrate (2), at least two electrically conductive contact pins (9) are passed through the mount, and the contact pins (9) are electrically connected to the at least one semiconductor light source (2), and wherein the contact pins (9) are each introduced into an electrically insulating sleeve (8), and the respective sleeve (8) is inserted into an associated cutout (7) in the mount.
