Abstract (en)
[origin: WO2011083270A2] The invention relates to a two-dimensional, multi-contact, tactile sensor comprising an upper layer (2) provided with longitudinal conductive elements (3) arranged according to an upper axis, and a lower layer (4) provided with longitudinal conductive elements (5) arranged according to a lower axis non-parallel to the upper axis. At least one of the longitudinal elements (3, 5) in said sensor has an incline on at least part of its edge, that is non-null in relation to its axis. The invention also relates to a display sensor provided with such a two-dimensional, multi-contact, tactile sensor.
