Abstract (en)

[origin: EP2522528A1] The processing device has an embossing device (1) provided with multiple work stations. The work stations have multiple embossing stations (24a,24b,24c). The embossing stations are provided for emboss processing of a partial surface of a side wall (6) of a container blank (4). The partial surface is restricted in axial direction and in peripheral direction. An output device is assigned to the last embossing station or an immediately subsequent work station is assigned. An independent claim is included for a method for emboss processing of a partial surface of a side wall of a container blank, particularly by a processing device.
