Abstract (en)

[origin: EP2522795A1] An operating device for a hopper/awning window unit, comprising an operating element (2) which can be associated with a locking mechanism (104) for the window unit (100) comprising a first mobile portion (2a) and means (3) for supporting the operating element (2) which can be associated with a mobile frame (102) at a channel (103) for keeping the operating element (2) connected to the mobile frame (102). The supporting means (3) comprise at least one connecting body (14, 54) fixed to the containment body (5) and comprising a portion with a smaller cross-section (14a, 54a) and a portion with a larger cross-section (14b, 54b) which form an undercut (15, 55) at least partly able to abut by resting on the plates (103d) of the lower wall (103c) of the channel (103), thus preventing the connecting body (14, 54) from passing through the slot (103a).
