Abstract (en)
[origin: EP2522800A2] The arrangement (1) has a slider (11) for adjusting inaccessible elements arranged in a running rail (2), where the slider comprises a base element and an extension element. The running rail comprises a holding web (9) with a groove (10) for receiving the slider, which overlaps a roller carriage (4) for adjusting the inaccessible elements arranged in the running rail. The holding web defines the running rail at a building element. The slider comprises a connecting lock secured into the groove against loosening.
