Abstract (en)

[origin: EP2522857A2] The system has a fluid circuit for an injected fluid, where the fluid passes through a heat exchanger (9). An internal control valve (6) is arranged in front of a compressor (13), and an external control valve (7) is arranged behind the heat exchanger. An electronic control unit (11) controls one of the internal and external control valves by using an algorithm, where temperatures for fluid flow at an inlet (4) and an outlet (5) of the heat exchanger are set with the control unit.
