Abstract (en)

[origin: WO2005013113A2] The invention relates to a display and control device for medical equipment, comprising several identically configured display/control units (6), which are located on a base unit (7). The base unit (7) is equipped with a bus (15), to which the units and components of the medical equipment are connected. The base unit (7) comprises connection devices, which are used to connect the display/control units (6) to the bus. Once a display/control unit (6) has been connected, a configuration unit transmits configuration data to said display/control unit and only then defines which function the display/control unit (6) is to fulfil. This permits defective display/control units to be simply replaced. The construction of the display/control units is likewise simple and not susceptible to malfunctions.
