Abstract (en)
[origin: WO2011086439A1] The present disclosure provides for a seating device comprising; a base panel (1) having plurality of ribs (1a) in predetermined pattern on top surface. And a resilient seat panel (2) having plurality of through perforations; said seat panel (2) is mounted on top of the base panel (1) in such a manner that peripheral part of the seat panel (2) is resting onto the base panel (1), to create space in-between the seat panel (2) and base panel (1).
