Abstract (en)

[origin: WO2011085939A1] The invention relates to a water-conducting household appliance (1), in particular a dishwasher or washing machine, and a method. The household appliance (1), which can be provided with a heatable and/or coolable circulating medium, especially a liquid rinsing liquor (S), during operation, is designed such that the change in temperature of the circulating medium over time can be determined in at least one heating and/or cooling phase (P1; P2) of the circulating medium and can be used as input data to determine the energy consumption.
